

Overview of asset-backed pension systems

Coverage of the OECD Global Pension Statistics exercise

The compilation of metadata relating to pension statistics is an essential part of the Global Pension Statistics project. Metadata allow for a better knowledge and understanding of the coverage of the OECD Global Pension Statistics (GPS) database, its completeness and limits.

This file describes the different types of asset-backed pension plans in each country. It provides the statistical data coverage of the GPS exercise and a detailed description of the various asset-backed pension plans by country. Information in this file is collected from national sources, which are usually Pension Authorities, National Statistical Offices, Central Banks and/or Ministries of Finance. Information in this document refers to December 2022 or to the latest year available.

This file reports the financing vehicle and the type of each plan under “Type of fund” and “Type of plan” respectively, following the OECD taxonomy. For more information on the OECD classification and taxonomy, see the *OECD Private Pensions: OECD Classification and Glossary*, available at www.oecd.org/dataoecd/0/49/38356329.pdf.

This file also compiles standardised information on some of the main features of pension plans, such as:

- whether the access to the plan can be linked to employment or professional activity (Yes/No);
- whether the employer can or has to contribute (Yes/No);
- whether the employer provides access to the (default) plan (Yes/No);
- whether the employer / social partners establish the plan (Yes/No);
- the benefit calculation: by reference to a formula based on the number of years of service and the salary, or by reference to the contributions paid and return achieved with those contributions;
- the type of guarantee: benefit level, annuity purchase price, capital guarantee, fixed return, absolute minimum return, relative minimum return, none (there can be a combination of several types of guarantee);
- the sharing of some risks (e.g. investment risk, interest rate risk, longevity risk) between: plan sponsor, and/or active members, and/or deferred members, and/or pensioners -- there may however be no risk sharing at all;
- the guarantor: plan sponsor (i.e. the employer), the pension fund, an insurance company, or none.

More information on the OECD GPS project can be found at: <http://www.oecd.org/daf/pensions/gps>.
