General notes

The Social Expenditure series in line with the SOCX methodology covers the period 2010-2018. Data for the years 2014-2018 are provisional and may be subject to change.

Data developed in line with the SOCX methodology in Colombia are based on databases used to measure General Government Expenditure by Purpose for central and local government and social security funds. The results are complemented with administrative records from other public sector entities and the entire private sector. Other important sources for this process were the results of the Annual National Accounts ("Cuentas Nacionales Anuales"), specifically the Integrated Economic Table ("Cuadro Económico Integrado CEI") and some matrices of "Who to Who" ("Quien a Quien") used within the process of obtaining the macroeconomic aggregates of the national accounts.

The data prepared for SOCX concern budgetary entitlements, i.e. they are measured the moment the right to the benefit is recognized, regardless of the effective date of payment. This facilitates compiling data on basis of "accrual" accounting. This recording practice can lead to differences with other national publications on the measurement of social expenditure where the transaction is recorded at another moment of the budgetary process, such as the initial appropriation or the committed value of the budget.

Sources:

- Integrated Financial Information System ("Sistema Integrado de Información Financiera" - SIIF Nación). This tool of the Ministry of Finance and Public Credit consolidates financial information of the entities that make up the General Budget of the Nation to exercise control over the budgetary and financial execution of decisions by the entities belonging to the Central and Decentralized Administration (except for state-owned companies) and their decentralized subunits. This recording system promotes greater efficiency in the use of the Nation's resources and provides timely and reliable information (http://www.urf.gov.co/webcenter/portal/SIIFNacion/pages_home).
- Single Form for Territorial Entities (" Formulario Único para entidades Territoriales ") - FUT: created by Decree 3402 of September 7, 2007, it collects information on the budgetary execution of income and expenditures and other basic official information of the territorial entities, in order to monitor, control, evaluate and where needed follow up. The departments, districts and municipalities report financial, economic, social and environmental information to the national authorities.
- Database of the income statements of the family compensation funds: the compensation funds are non-profit-making legal entities under private law, organized as corporations in line with the Civil Code, which perform social security functions and are subject to State control and supervision in the manner established by law, whose main function is to administer the family allowance.
- 4. Health: OECD Statistics (www.oecd.org/health/healthdata)
- Integrated Economic Chart of the National Accounts of Colombia (" Cuadro Económico Integrado de las Cuentas Nacionales de Colombia ") - CEI DANE. The results of the Colombian National Accounts detailed for social benefits in cash and in kind are detailed in the "Who to Who" ("Quien a Quien") matrices as worksheets of the National Accounts processes. The data are available up to 2018 (<https://www.dane.gov.co/index.php/estadisticas-por-tema/cuentas-nacionales/cuentas-nacionales-anuales#cuentas-de-sectores-institucionales>).
- Results of the calculation of Government Expenditure by Purpose with data for 2009 up to 2018. Government Expenditure by Purpose is a specific analysis that reflects the purpose for which the general government allocates its expenditure, according to the domains of its intervention. Result were obtained in line with the System of National Accounts (SNA) for the year 2008 and the Public Finance Statistics Manual (PFSM) for the year 2014, corresponding to the OECD Classification of Government Functions (COFOG). COFOG data is presented at two levels of detail: division and group. The sources of information are the Integrated Financial Information System ("Sistema Integrado de Información Financiera", SIIF) for central government; and, the information available in the Single Territorial Form ("Formulario Único Territorial", FUT) for local government. This information is complemented with the financial statements of the National General Accounting Office, regarding the social security system and other entities that are not covered by the SIIF or the FUT. In addition, the budgetary information of entities that are part of the National Environmental Information System (SINA) and data collected directly by DANE were taken into account (<https://www.dane.gov.co/index.php/estadisticas-por-tema/cuentas-nacionales/cuentas-nacionales-anuales#cuentas-de-sectores-institucionales>).

Break in series:

The provisional series in Colombia concern the period 2014-2018.

There is a break in the series for public health expenditure from 2014 onwards because of a change in the health spending series for the subsidized regimes "Regimen Subsidiado".
