

OECD Health Statistics 2025

Definitions, Sources and Methods

Alcohol consumption in litres per capita (age 15+)

Annual consumption of pure alcohol in litres, per person, aged 15 years old and over.

Notes:

- 1 Most countries typically provide sales data as a proxy for consumption, as indicated in the methodology provided below. Caution should thus be used in interpreting the data.
 - Methodology to convert alcoholic drinks to pure alcohol may differ across countries. Typically beer is weighted as 4-5%, wine as 11-16% and spirits as 40% of pure alcohol equivalent.
 - See below details by country on tourist consumption, cross-border trade, unrecorded/illicit consumption, conversion factors and population data.

The **WHO Global Information System on Alcohol and Health (GISAH)** (accessed in August 2025, with data updated from 2000 onwards) has been used as a source for several OECD countries (see detailed list below). Other countries have supplied data directly.

Database available at [https://www.who.int/data/gho/data/indicators/indicator-details/GHO/alcohol-recorded-per-capita-\(15\)-consumption-\(in-litres-of-pure-alcohol\)](https://www.who.int/data/gho/data/indicators/indicator-details/GHO/alcohol-recorded-per-capita-(15)-consumption-(in-litres-of-pure-alcohol)).

WHO GISAH methodology:

- **Recorded alcohol per capita (15+) consumption** of pure alcohol is calculated as the sum of beverage-specific alcohol consumption of pure alcohol (beer, wine, spirits, other) from different sources. The first priority in the decision tree is given to government statistics; second are country-specific alcohol industry statistics in the public domain (Canadean, IWSR-International Wine and Spirit Research, OIV-International Organisation of Vine and Wine, Wine Institute, historically World Drink Trends); and third is the Food and Agriculture Organization of the United Nations' statistical database (FAOSTAT).
- In order to make the conversion into litres of pure alcohol, the alcohol content (% alcohol by volume) is considered to be as follows: Beer (barley beer 5%), Wine (grape wine 12%; must of grape 9%, vermouth 16%), Spirits (distilled spirits 40%; spirit-like 30%), and Other (sorghum, millet, maize beers 5%; cider 5%; fortified wine 17% and 18%; fermented wheat and fermented rice 9%; other fermented beverages 9%).

Further information: <http://www.who.int/gho/alcohol/en>.

Sources and Methods

Australia

Sources:

2018 onwards: **Australian Institute of Health and Welfare**, Alcohol available for consumption in Australia, available at <https://www.aihw.gov.au/reports/alcohol/alcohol-available-for-consumption-in-australia/contents/trends-in-alcohol-available-for-consumption>, viewed 12 December 2024.

Up until 2017: **Australian Bureau of Statistics**. Apparent consumption of alcohol, Australia. ABS Cat. No. 4307.0.55.001. Canberra: ABS. (Annual).

Methodology:

- Estimates of alcohol available for consumption per capita are based on the availability of alcoholic beverages in Australia. These data provide estimates of the quantity of pure alcohol available for consumption from beer, wine, spirits, and Ready to Drink (pre-mixed) beverages (RTDs), plus estimates of

the total volume of beer and wine available for consumption. Estimates of the quantity of pure alcohol available for consumption from cider are included from 2004-05 onwards.

- Estimates of 'alcohol available for consumption' are derived using information related to supply (that is, data on domestic sales of Australian produced wine, excise data on alcohol produced for domestic consumption, data on imports and an estimated component for home production), as opposed to actual consumption from a survey.
- No adjustments are made for changes in stocks; duty-free alcohol imported by individual overseas travellers; alcohol which is imported into Australia, cleared through a bonded warehouse and then subsequently re-exported; or alcohol that has been stored or cellared, used in the preparation of food or discarded as waste.
- All alcohol made available for consumption in a particular year is therefore assumed to have been consumed in that year.
- The weighting used for alcohol content of different types of drinks is available from <https://www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4307.0.55.001Explanatory%20Notes12017-18?OpenDocument>.
- Estimates from 2011 onwards were recalculated following the adoption of the collection by the Australian Institute of Health and Welfare. This included validation of previous data sources, and changes to the calculation methodologies.
- Timeseries was recalculated in 2024, marginally impacting some estimates between 2016 and 2019.
- The year reported is the financial year 1 July to 30 June (e.g. 2016-17 is reported as 2016).

↗ Breaks in time series in 2004, 2008 and 2014:

- Data for 2014-15 onwards due to change in methodology for wine.
- Data for 2008-09 onwards due to change in methodology for wine.
- Data for 2004-05 onwards due to inclusion of cider.

| | | | |
|-----------------------------|---|---|--|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer: Updated yearly, for 2022-23 depending on the strength it was 2.41% - 4.60%. Wine: Updated yearly, for 2022-23 depending on the type of wine it was 11.20% - 17.90%. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

Austria

Source: **Handbuch Alkohol – Österreich (BMASGK)**, Band 1: Statistiken und Berechnungsgrundlagen 2025.

Methodology: Data are based on the following alcohol content: about 5.0% for beer, and about 11.5% for wine. It is also assumed that the consumption of pure alcohol from musts was 6% until 1993 and dropped to 3% between 1993 and 2003. 20g of pure alcohol corresponds to a "standard Austrian glass" of 1½ litre of wine or 1½ litre of beer.

Further information: <https://www.sozialministerium.at/Themen/Gesundheit/Drogen-und-Sucht/Alkohol.html>.

| | | | |
|-----------------------------|---|---|--|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No. Tourist consumption is not included based on the assumption that the amount consumed by tourists in Austria is nearly the same as the amount consumed by Austrian citizens abroad. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes, commercial imports and exports are included. Private cross-border trades are not recorded. |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No, unrecorded consumption is not included. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer: 5 Vol.-% Wine: 11.5 Vol.-% Spirits: 42 Vol.-% |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

Canada

Source: **Statistics Canada**, Control and Sale of Alcoholic Beverages in Canada.

From 2005: Table 10-10-0010-01 (formerly CANSIM 183-0023), see

<https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1010001001>.

1989-2004: Table 10-10-0034-01 (formerly CANSIM 183-0019).

1960-1988: Table 10-10-0029-01 (formerly CANSIM 183-0006).

Coverage: Population aged 15 years old and over.

Methodology:

① Statistics on sales of alcoholic beverages by volume should not be equated with data on consumption. Sales volumes include only sales as reported by the liquor authorities and their agencies, including sales by wineries, breweries, and other outlets that operate under license from the liquor authorities. Consumption of alcoholic beverages would include all of these sales, as well as any unreported volumes of alcohol sold

through ferment-on-premise operations or other outlets (homemade wine and beer, wine and beer manufactured through brew-on-premises operations, sales in duty-free shops, etc.), and any unrecorded or illegal transactions.

① Similarly, statistics on sales of alcoholic beverages by dollar value of sales should not be equated with consumer spending on alcoholic beverages. Sales data refer to the revenues received by liquor authorities, wineries and breweries. These revenues include sales to licensed establishments, such as bars and restaurants. Therefore, sales data do not reflect the total amount spent by consumers on alcoholic beverages, since the prices paid in licensed establishments are greater than the price paid by those establishments to the liquor authorities.

Note: Data are presented by fiscal year (April to March). The reference year is the last year of the range (e.g. FY 2003/2004 is shown in 2004 data).

From 2005: In 2015, the Control and Sale of Alcoholic Beverages program questionnaire, the "Government Liquor Authority: Report of Operations," was updated after conducting qualitative testing involving field interviews with provincial and territorial liquor authorities. A fourth beverage category was added to the questionnaire - ciders, coolers, and other refreshment beverages (CCORB). International organisations including the World Health Organization publish alcohol statistics with four beverage categories: spirits, wine, beer, and other. Prior to the 2015 update, ciders and wine coolers were included with wines; spirit coolers were included with spirits; and beer coolers were included with beer. Other refreshment beverages not elsewhere classified could be reported as a spirit, wine, or beer, at the discretion of the respondent. To improve the comparability of these statistics, the fourth beverage category, CCORB, was added to the questionnaire. As of fiscal year ending March 31, 2014, most liquor authorities in Canada report sales using a variant of the fourth category that includes ciders, coolers, "ready-to-drink" beverages and/or other refreshment beverages.

- Per capita sales by volume are based on the population aged 15 years and older. This is in accordance with the practice of Health Canada in presenting trends that are more realistic in the consumption of alcoholic beverages. This allows comparability with other countries, the Organisation of Economic Co-operation and Development and the World Health Organisation as they also present alcohol per capita data using the population aged 15 years and older.
- Absolute volume of sales of alcoholic beverages is calculated by multiplying the sales volume by the percentage of alcohol content for each product category. The variable has been corrected for all years within this period.

1989-2004: Volume of sales of alcoholic beverages in litres of absolute alcohol is calculated by multiplying the sales volume by the percentage of alcohol content. In the case of spirits, the percentage of alcohol content is 40% with the exception of liqueurs (20%) and spirit coolers (5%). The percentage of alcohol content for most wines ranges between 11% and 12%. Consequently, the conversion rate used for wines is estimated at 11.5%. However, some wines may have an alcohol content above or below this range. The conversion rate used for wine-based coolers is 5%. The conversion rate used for beer is also estimated at 5%. The alcohol content of most beers ranges between 4% and 6.5%. The "wine" category includes ciders.

1960-1988: Adjusted from fiscal-year data on a 25/75 basis. Beer is weighted as 5%, wine as 11.5%, and spirits as 40% of pure alcohol equivalent.

↗ Breaks in time series in 1989 and 2005 due to a change in methodology.

Further information: <http://www.statcan.gc.ca/>.

| | | | |
|----------------------------|--|---|--|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | The CSAB program collects data on the sale of all alcohol in Canada by the relevant liquor authorities of each province/territory. Data are for sales only, not consumption. Presumably, sales data would include the alcohol purchases by tourists, but it cannot be separated out from the total sales nor does it relate to consumption. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | The CSAB program collects data on the sale of all alcohol in Canada by the relevant liquor authorities of each province/territory. |

| | | | |
|-----------------------------|---|---|--|
| | | | <p>We record the liquor authorities' sales of imported beverages, but not products that are directly imported by Canadian consumers (since they are not purchasing through the liquor authority). Imports are not included since this program is only for the sale of alcohol by the provincial/territorial liquor authorities.</p> <p>If any of the liquor sold and recorded by the provincial/territorial liquor authorities is exported, then yes it would be included in the sales values. For example, duty-free sales would be included.</p> |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No, the CSAB program records legal alcohol sales only. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | A detailed % for each lower-level beverage category was used, as follows: |

| Beverage | % Vol. |
|-----------------------------------|--------|
| Beer | 0.050 |
| Beer (if breakdown not available) | 0.050 |
| Light Beer (4% and under) | 0.040 |
| Regular Beer (4.1% - 5.5%) | 0.050 |
| Strong Beer (5.6% and over) | 0.070 |
| Beer Coolers | 0.070 |
| Ciders | 0.055 |
| Other Refreshment Beverages | 0.080 |
| Spirit Coolers | 0.060 |
| Wine Coolers | 0.045 |
| Alcohol | 0.900 |
| Brandy | 0.400 |
| Gin | 0.400 |
| Liqueurs | 0.250 |
| Other | 0.350 |
| Rum | 0.400 |
| Vodka | 0.400 |
| Whisky | 0.400 |
| Non-Sparkling Fortified | 0.180 |
| Non-Sparkling Red | 0.130 |
| Non-Sparkling Rose | 0.110 |
| Non-Sparkling White | 0.120 |
| Other | 0.125 |
| Other Wines | 0.150 |
| Sparkling | 0.100 |

| | | | |
|------------|---|---|---|
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes, the population aged 15+ is used for per capita values. |
|------------|---|---|---|

Chile

Sources:

From 2000 onwards: **Office of Agrarian Studies and Policies (Ministry of Agriculture)**, based on information reported by the Agricultural and Livestock Service (SAG), Association of beer producers of Chile (ACECHI), Association of Liquors of Chile, Compañía de Cervecerías Unidas (CCU), and with information from the Central Bank and the National Customs Service (Servicio Nacional de Aduanas).

Coverage: Nationwide.

Methodology:

- Data are calculated based on the "apparent consumption" of litres of wine, beer, pisco, national liquors, imported whisky, imported liquors and other imported products (including lower alcoholic beverages).
- The apparent consumption expresses the availability of a product for a population in a given time. It is calculated according to the statistical information on production and foreign trade. The calculation is

synthesised in this formula: Apparent Consumption = ((Initial Stock + Production + Imports) - (Exports)) / Population aged 15 and over.

- The population used for the per capita consumption corresponds to the population aged 15 and over estimated by the National Statistics.

⚠ **Break in time series in 2016:** From 2016 onwards, the types of alcoholic beverages and some graduations have been changed, and the information collection method has been adjusted compared to the previous period (up to 2015).

⚠ **Break in time series in 2000** due to a change in source and methodology.

1963-1999: World Drink Trends (WDT).

❗ Until 1980, data on the consumption of spirits were not available.

| | | | |
|-----------------------------|--|--|--|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) NO | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? NO | Is not excluded. Tourist consumption data are not available. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) YES | Are exports excluded from the data you provide? (Y/N) YES | Imports are included, exports are excluded. Formula: ((Initial stock + production + imports) - exports) / population |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) NO | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? NO | No. Chile doesn't have unrecorded/illicit sales or consumption estimations. We use the general estimations provided by WHO. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Wine: 12% Beer: 5% Whisky and imported spirits: 40% Other imported spirits: 20% Pisco (National distilled): 35% Other national spirits: 32% |
| Population | Do you use population aged 15+ as your denominator (Y/N)? Yes | If N, what population do you use? Specify the age group and the source if possible. | |

Czechia

Source: Czech Statistical Office, Consumption of food statistics.

Calculation per capita aged 15 years old and over by the Institute of Health Information and Statistics of Czechia.

Methodology:

- Total consumption is derived from data on industrial production, initial and final stocks, imports and exports of alcohol.

- Data cover all beverages containing more than 0.5 percent of alcohol in volume.

Weights used: spirits 40 %, wine 11 % (grape wine), resp. 14.5 % (other wine including mead), beer (including draft beer, lagers, beer with higher percentage of alcohol, diabetic beer, non-alcoholic beer) 3.3 % (3.4 % up until 2019) of pure alcohol.

| | | | |
|----------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes (imports and exports are included) |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No (data on unrecorded sales are not included) |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer 3.3 % (3.4 % up until 2019) Wine 11 % - grape wine, 14.5 % - other wine (including mead) Spirits 40 %. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes (population as of 1. 7.) |

Denmark

Source: Statistics Denmark (table ALKO2).

Coverage:

- Consumption and sales of pure alcohol per inhabitant aged 18 years old and over in Denmark (average numbers of litres).

- Data include tourist consumption in Denmark.

- Border trade and unrecorded/illicit sales are not included.
- Missing values between 1961 and 1964 cannot be provided, because the observations are missing or fall under the limit of discretion/uncertainty.

Further information: <https://www.statistikbanken.dk/ALKO2>.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | The figures are a total count from SKAT (The Danish tax), so tourists' consumption in Denmark is included. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Border trade is not included, as there are no sources that show the numbers accurately. |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | Is not part of the figures for sales in Denmark, as the figures are a Total Census from SKAT. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | The figures from SKAT are not weighted, but the figures are calculated for beer / wine / spirits in another table "ALKO4". Tax class 1: Alcohol content > 1.2 – 6%. Tax class 2: Alcohol content > 6 – 15%. Tax class 3: Alcohol content > 15 – 22%. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Data cover the entire population and Danes aged 18+ years old. |

Estonia

Sources:

From 2002: Estonian Institute for Economic Research, Annual data on alcohol market and consumption.
Until 2001: WHO Global Information System on Alcohol and Health (GISAH), extracted 29 June 2020 at <http://www.who.int/gho/alcohol/en/>.

Data come from:

- 2000-2001: WHO Global Survey on Alcohol and Health 2012 (Alcohol Market Yearbook, excluding tourist consumption).
- 1990-1999: World Drink Trends (WDT).

Methodology:

From 2002:

① Estonian total consumption equals legal sales minus exports by tourists minus consumption by tourists in Estonia plus illegal sales and buying from abroad. Purchases from abroad are included from 2016.

Source: *Alcohol market, consumption and harms in Estonia*, Yearbook 2021.

① Total alcohol consumption for data 2002-2005 equals legal sales minus exports by tourists plus illegal sales.

- The decrease observed between 2008 and 2009 has 3 main reasons:

- The economic crises and the decrease in people's incomes in 2008 brought the turn in the alcohol consumption.

- Starting from 14th of July 2008, the retail sale of alcoholic beverages in shops is allowed daily from 10:00 am to 10:00 pm.
- Also alcohol tax increased twice in 2008: 01/01/2008 (+10%) and 01/07/2008 (+17%).

Until 2001: see methodology above for the WHO Global Information System on Alcohol and Health (GISAH).

 **Break in time series in 2002** due to a change in source.

Further information:

From 2002: <http://www.ki.ee/en>. More information: *Alcohol market, consumption and harms in Estonia. Yearbook 2023*. Estonian Institute of Economic Research, see https://www.tai.ee/sites/default/files/2023-11/Alkoholi_aastaraamat_2023.pdf, and

2023 yearbook in Estonian <https://www.sm.ee/sites/default/files/documents/2024-08/Eesti%20alkoholiturg%2C%20alkoholi%20tarbimine%20ja%20alkoholipoliitika%202023.%20aastal.pdf>.

Until 2001: <http://www.who.int/gho/alcohol/en/>.

| | | | |
|-----------------------------|---|---|--|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | Yes. Consumption by tourists in Estonia: 1,02 litres per capita aged 15 and over in 100% alcohol. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | Yes. 0,49 Litres per capita aged 15 and over in 100% alcohol. Consumption and Trade of Illegal Alcohol and Cigarettes and Envelope Wages in Estonia 2018 (based on inhabitants' estimation), Estonian Institute of Economic Research. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | In 2018 average % of strong alcohol was 38% in 2018, of beer 5.1%, of wine 12.2% and of light alcoholic beverages 4.7%. Thus, the coefficients 0.38, 0.051, 0.122 and 0.047 have been used for the conversion to absolute alcohol, respectively. Coefficients for beer and light alcohol are not constant and are adjusted annually. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

Finland

Source: Finnish Institute for Health and Welfare (THL), Sirpa Virtanen. Yearbook of alcohol and drug statistics 2020.

Methodology:

- Undocumented consumption of alcoholic beverages is not included.

- In 1969, the alcohol legislation was liberalised, and shops were allowed to sell beer. Some municipalities, however, opted out and did not allow selling of beer in their shops. Before that, beer was only available in state monopoly shops, which were available e.g. in the countryside.

Hungary

Source: Hungarian Central Statistical Office (KSH), Summary Tables (STADAT).

Methodology:

- Data are calculated on the basis of production and external trade statistics.
- Alcoholic drinks are converted to 100% alcohol.
- The annual consumption calculated in this way is applied to the population aged 15 years old and over.

Note: The population numbers for the period 2012-2022 have been recalculated retrospectively on the basis of the final census data of 1 October 2022, thus affecting the alcohol consumption in litres per capita (age 15+).

Further information: <http://www.ksh.hu>.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | Alcohol consumption data include tourist consumption. Unfortunately we can't provide a recent estimate for tourist consumption. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Alcohol consumption data include imports and exclude exports. |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | Alcohol consumption data exclude unrecorded/illicit sales or consumption. Unfortunately we can't estimate it. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer 5%, Wine 11,5% |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

Iceland

Source: Statistics Iceland. Data available at

https://px.hagstofa.is/pxen/pxweb/en/Samfelag/Samfelag_heilbrigdismal_lifsvenjur_heilsa_1_afengiogr_eyk/HEI07202.px.

Methodology:

- Data from 2011 onwards were updated in October 2024 according to the new population estimates, as the method for estimating the population in Iceland was revised in March 2024.
- The figures on quantity do not take into account alcohol imported by ship and aircraft crews and tourists entering the country, nor alcohol exported by the State Alcohol and Tobacco Company of Iceland (ÁTVR) and others, or sold to the Duty Free Store at Keflavík Airport.
- The sale of beer was legalised on 1 March 1989. As of 1 December 1995 the State monopoly on the import and wholesale of alcohol was abolished and importers, producers and wholesalers holding a special licence issued by the National Commissioner of the Icelandic Police were permitted to resell alcohol.
- As of 2008, volume is calculated on the basis of income from the taxation of alcoholic beverages and via information on sales of alcohol from the ÁTVR. Wine covers alcoholic beverages with an alcohol percentage of 15% or less by volume, except beer and spirits with those over 15% by volume.
- From 1995 to 2007, the figures cover the sales of ÁTVR and the sales of licence holders.
- 1993-2007: Alcoholic beverages with an alcohol percentage of 22% or less by volume, except beer, are counted as wine and those over 22% by volume are counted as spirits.
- For the years 1980-1992, wine covers table wine and fortified wine, and spirits refer to stronger alcohol.

 **Break in series in 2008:** Change made in collection of data and methodology.

Korea

Sources:

From 2015: Domestic alcohol sales: **National Tax Service, Statistical Yearbook of National Tax**.

From 1988 to 2014:

- Domestic alcohol sales: **National Tax Service, Statistical Yearbook of National Tax**.
- Alcohol imports: **Korea Customs Service, Statistical Yearbook of Foreign Trade**.

Until 1987: WHO Global Information System on Alcohol and Health (GISAH), accessed on May 14th, 2015. Data come from the Food and Agriculture Organization of the UN (FAO).

Methodology:

From 2015:

- The Korean official data for alcohol consumption include all kinds of alcohol (from low degree to high degree).

- Data are compiled from the National Tax Service data. The National Tax Service data include tax information on all kinds of alcohol distributed in Korea such as beer, spirits, fruit wine and whisky. It includes imported alcohol.

From 1988 to 2014:

- The Korean official data for alcohol consumption include all kinds of alcohol (from low degree to high degree).

- Data are compiled from the National Tax Service data and the Korea Customs Service data. The National Tax Service data include tax information on all kinds of alcohol distributed in Korea such as beer, spirits, fruit wine and whisky. The Korea Customs Service also has information about taxation on all types of imported alcohol like wine, vodka and brandy.

Until 1987: see methodology above for the WHO Global Information System on Alcohol and Health (GISAH).

⚠ Break in time series in 1988 due to a change in source.

Luxembourg

Source: WHO Global Information System on Alcohol and Health (GISAH).

Data extracted August 2025 at [https://www.who.int/gho/data/indicators/indicator-details/GHO/alcohol-recorded-per-capita-\(15\)-consumption-\(in-litres-of-pure-alcohol\)](https://www.who.int/gho/data/indicators/indicator-details/GHO/alcohol-recorded-per-capita-(15)-consumption-(in-litres-of-pure-alcohol)).

① **Deviation from definition:** Average consumption of France and Germany, calculated from WHO Global Information System on Alcohol and Health (GISAH) data (1961-2020).

- Luxembourg does not publish any official statistics about the consumption of alcoholic beverages. As a small country, Luxembourg is confronted to the following problem: the consumption of pure alcohol per capita is calculated by the annual production + import - export of alcohol divided by the number of residents (>15 years of age).

- As Luxembourg has a large number of non-residential workers (170 000 in 2015), which represents 45% of the working population, as well as alcohol prices lower than the surrounding countries, some part of the alcohol sold is purchased and consumed by non-residents. At the international level, some authors have tried to adjust for this but those adjustments were not specific for Luxembourg. In consultation with Dr. Jürgen Rehm (international expert on problems related to alcohol consumption, WHO Global Information System on Alcohol and Health), it has been decided that at the international level the consumption of pure alcohol is published as the average of the consumption of France and Germany.

Further information: <http://www.who.int/gho/alcohol/en/>.

Mexico

Sources:

From 2007: Volume of national sales of alcoholic beverages. **Monthly Survey of the Manufacturing Industry (EMIM)** (Volumen de ventas nacionales de bebidas alcohólicas. Encuesta mensual de la Industria manufacturer, EMIM).

Until 2006: **WHO Global Information System on Alcohol and Health (GISAH)**, extracted 29 June 2020 at <https://apps.who.int/gho/data/node.gisah.A1039?lang=en&showonly=GISAH>.

Data come from:

- 2000-2006: Merged data from Canadian, OIV, and IWSR.
- 1990-1999: Consultores internacionales.

- 1961-1989: World Drink Trends (WDT).

● Before 1966 and between 1976 and 1983, data on consumption of spirits were not available.

Methodology:

From 2007:

- The pure alcohol by volume is calculated as the product of national sales reported in litres and the alcohol content (% alcohol by volume) for each kind of beverages. The % alcohol by volume is considered to be as follows: Beer (4.6%), Wine (14%), Tequila (40%), Rum and other liqueurs (40%).

● The adult per capita consumption of pure alcohol in beverages is calculated as the quotient of annual beverage-specific pure alcohol and the number of persons aged 15 years old and over who reported drinking (100% of the population - % of people who abstain). The percentage of abstainers for 2003-2007 is the same reported in 2003; for the period 2008-2010, it is the percentage reported in 2008 and for the period 2011-2015, it is the percentage reported in 2011. The total adult per capita consumption of pure alcohol is calculated as the sum of beverage-specific consumption of pure alcohol.

Until 2006: see methodology above for the WHO Global Information System on Alcohol and Health (GISAH).

● Break in time series in 2007 due to a change in sources.

Further information: <http://www.who.int/gho/alcohol/en/>.

Netherlands

Sources:

2018 onwards: STAP, Dutch Institute for Alcohol Policy, see *Feiten en Cijfers* (www.stap.nl).

2010-2017: Jellinek Institute, Trimbos Institute, Nationale Drugmonitor.

2004-2009: Statistics Netherlands, Table consumption of food, drinks and tobacco. Data from Centraal Brouwerij Kantoor (on beer), Productschap Wijn (on wine), and Productschap Dranken Commissie Gedestilleerd (on other alcoholic beverages).

1991-2003: World Drink Trends 2005.

Up to 1990: Statistics Netherlands, Statistisch Zakboek; Maandbericht van de Bevolking 1990.

Methodology:

2010 onwards: Litres of alcohol per capita for wine, beer and distilled drinks, summed and recalculated per person aged 15 years and older.

2004 onwards: For calculation to litres of pure alcohol, the average alcohol percentage of beer is set at 5% and the average alcohol percentage of wine is set at 13%.

1991-2003: Data were adjusted by the OECD Secretariat to take into account only the population 15 years old and over.

Up to 1990: The data are based on revenues of excise duties and on fiscal bands issued to manufacturers and importers. Therefore, actual consumption may differ.

| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer: 5%; wine: 12.5%; spirits: 35% |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

New Zealand

Source: Statistics New Zealand.

Methodology:

- The volumes of beverages available for consumption are obtained from New Zealand Customs Service figures on beverages, produced or bottled, for local consumption on which duty has been paid, and Statistics New Zealand External Trade Statistics. Statistics New Zealand's quarterly population estimates are used to calculate the volume of pure alcohol available per person aged 15 years and over.
- The statistics measure how much alcoholic beverage is released to the domestic market, and therefore available for consumption. The statistics do not measure actual consumption. Information is not available to measure the change in the level of stocks that are held pending sale and therefore not yet consumed. The figures also exclude alcoholic beverages produced by households.
- Alcohol available for consumption is calculated from production for domestic consumption plus imports less re-exports.
- The means of calculating alcohol available for consumption was revised with the abolition of bonded warehouses that was associated with the introduction of GST in October 1986. However, the time-series has been maintained.
- Table wine has an alcohol content less than or equal to 14%. Fortified wine has an alcohol content greater than 14%. Spirit-based drinks have an alcohol content less than or equal to 23%. They include RTDs (ready-to-drink beverages), beers, and wines that are spirit-based. Spirits have an alcohol content greater than 23%.
- Alcohol consumption data relate to the year ended December.

Further information:

- <https://www.stats.govt.nz/information-releases/alcohol-available-for-consumption-year-ended-december-2021>.

- Alcohol available for consumption DataInfo+ available at https://datainfoplus.stats.govt.nz/Item/nz.govt.stats/670bcc59-c688-4468-be48-2af03ed6b363?_ga=2.49422566.1783163249.1647979289-1833470938.1643248928.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No – tourist consumption is not excluded and is not separately estimated or quantified. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes – imports are included (as total imports less re-experts); Yes – exports are excluded. |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No – this data is not included, and an estimate cannot be provided. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer: 1.15% - 5.1%, according to specific sub-categories (each defined by alcoholic content range); Wine: 11% (table wine), 18% (fortified wine); Spirits: 42% (spirits), 2% - 18% (spirit-based drinks). |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes – in the data provided, population aged 15+ is used as the denominator. |

Norway

Source: Statistics Norway / Directorate of Customs and Excise. Production / import statistics based on data from the Directorate of Customs and Excise.

Methodology:

- The statistics are register-based. Each registered company must send a tax declaration to the customs service by the 18th of the following month. Statistics Norway receives information from customs eight weeks later.
- Information about each tax group is checked against previously sent in declarations. The totals are checked against numbers published (submitted) by the state-owned wine and spirit monopoly and Norwegian Brewers and Soft Drink Producers.
- Data refer to alcohol production.

Further information: http://www.ssb.no//alkohol_en/.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | Y – tourist imports are excluded N – there is no estimate. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Y – imports are included N – exports not excluded |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | N – estimates of unrecorded/illegal sales are not included |

| | | | |
|---------------------------|---|---|--|
| | | | N – there are no estimates |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Spirits: Any beverage with an alcoholic strength above 22% by volume. Wine: Any beverage, except beer, with an alcoholic strength of more than 4.7 to 22% by volume. Alcoholic soft drinks: Any beverage, except beer, with an alcoholic strength above 0.7 to 4.7% by volume. Beer: Beer with an alcoholic strength above 0.7 inch. 22% by volume. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | Yes |

Poland

Sources:

From 2000: Statistics Poland.

1961-1999: World Drink Trends (WDT) 2005.

Methodology:

From 2000: Calculation method is consistent with that of the OECD. Methodology to convert alcoholic drinks to pure alcohol is worked out according the method: beer is weighted as 5%, wine and mead as 12%.
1961-1999: Data were adjusted by the OECD Secretariat to take into account the population aged 15 years old and over only.

- The decrease in alcohol consumption in litres per capita between 1980 and 1981 was caused by the implementation of a rationing system in August 1981. Adult citizens could legally buy only half a litre of vodka or a bottle of imported wine per month. Beer and local wines were available without rationing.
- Consumption of alcohol cover the quantity of products produced in the country, less exports, plus imports and corrected by the balance of stocks at the producers and at trade entities.
- For consumption per capita data, the population as of 30 VI was adopted.
- Illegal sources of alcohol were not included.

Further information: <http://stat.gov.pl/english/>.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No. Tourist consumption is not excluded and we do not have any estimate for tourist consumption. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes. Imports of alcohol are included in the data and exports are excluded. |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No. The consumption of unrecorded/illicit alcohol are not included in the data. We do not have any estimate for unrecorded/illicit sales. |

| | | |
|--------------------|---|---|
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | Beer – 5% alcohol Wine – 12% alcohol Spirits – we use data of spirits beverages in terms of 100% alcohol. |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. Y. We use population aged 15+. |

Slovenia

Sources:

From 1999: National Institute of Public Health.

Until 1998: WHO Global Information System on Alcohol and Health (GISAH), accessed in May 2014.

<http://www.who.int/gho/alcohol/en/>. Data come from the Food and Agriculture Organization of the UN (FAO) (1981-1998).

Methodology:

From 1999 onwards:

- Litres of pure alcohol consumption in spirits, wine and beer consumed per capita in the country during the calendar year, as calculated from official statistics on production (industrial and agricultural), import and export, taking into account stocks.

- The conversion factor used to estimate the amount of pure alcohol in beer is 5%, in wine 11% and in spirits 40% of alcohol.

- Target population: inhabitants of Slovenia, aged at least 15 years of age (i.e., 15 years or older).

Until 1998: see methodology above for the WHO Global Information System on Alcohol and Health (GISAH).

↗ Break in time series in 1999 due to a change in source.

United Kingdom

Source: British Beer and Pub Association.

Methodology:

- Data are based on HMRC clearance data, i.e. on the payment of duty on alcohol when it is released for consumption.
- Average beer strength: 4.18%, wine 12.58%, cider 5.03%.

Coverage: Data for the United Kingdom.

Further information: <http://www.beerandpub.com>.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) (N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? (N) | Consumption by tourists in the UK is included (or rather not excluded) but they are not included in the population total when we divide. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) (Y) | Are exports excluded from the data you provide? (Y/N) (Y) | (Y) |
| Unrecorded / illicit | Are estimates for unrecorded/illegal sales or consumption included in the data you provide? (Y/N) (N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? (N) | (N) |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | Beer – not necessary, total alcohol clearance from HMRC Wine = 12.58% Sparkling wine = 11% Wine >15% = 17% Made wine 1.2% to 5.5% = 4.7% Made wine 5.6% to 15% = 12.58% Spirits – not necessary, total alcohol clearances from HMRC |
| Population | Do you use population aged 15+ as your denominator (Y/N)? (Y) | If N, what population do you use? Specify the age group and the source if possible. | (Y) |

United States

Sources: U.S. Department of Health and Human Services/National Institute of Health/National Institute on Alcohol Abuse and Alcoholism. Division of Epidemiology and Prevention Research.

Apparent Per Capita Alcohol Consumption: National, State, and Regional Trends, 1977-2021 (Slater, Megan E.; Alpert, Hillel R.) April 2023. *Surveillance Report #120*. April 2023.

Coverage: The data cover the U.S. national consumption of beer, wine, and distilled spirits as well as all alcoholic beverages combined. The Alcohol Epidemiologic Data System (AEDS) makes every effort to obtain alcoholic beverage sales data from all States and the District of Columbia. AEDS prefers sales data to production and shipment data from beverage industry sources because sales data more accurately reflect actual alcoholic beverage consumption levels.

Methodology:

- Data do not match the OECD defined age range. Estimates based on population aged 15 years old and over prior to 1970, and on population aged 14 years old and over thereafter. Although age 14 years old is below the minimum legal age for the purchase of alcoholic beverages throughout the United States, most self-report surveys indicated that many 14-year-olds drink alcoholic beverages.
- The Alcohol Epidemiologic Data System (AEDS) staff attempts to obtain alcoholic beverage sales because sales data reflect more accurately actual consumption of alcoholic beverages than do the production and shipments data from beverage industry sources.

Further information: NIAA website, <https://pubs.niaaa.nih.gov/publications/surveillance.htm>.

| | | | |
|-----------------------------|---|---|---|
| Tourist consumption | Is this excluded from the data you provide? (Y/N) | Can you provide a recent estimate for tourist consumption in Litres /person, specifying the year and the source of the information? | No. Tourist consumption is included and cannot be teased apart from the totals. |
| Cross-border trade | Are imports of alcohol included in the data you provide? (Y/N) | Are exports excluded from the data you provide? (Y/N) | Yes. Imports are included and exports are excluded. |
| Unrecorded / illicit | Are estimates for unrecorded/illicit sales or consumption included in the data you provide? (Y/N) | Can you provide a recent estimate in Litres /person, specifying the year and the source of the information? | No. The USA do not have any data tracking unrecorded/illicit sales or consumption. |
| Conversion factors | Which % alcohol weightings do you use for beer (%), wine (%) and spirits (%)? | | <p>The Alcoholic Epidemiologic Data System (AEDS) uses an estimate of average ethanol content in the alcoholic beverages to convert the gallons of sold or shipped beer, wine, and spirits into gallons of ethanol (pure alcohol) before calculating per capita consumption estimates.</p> <p>For data years 1977–2017, the ethanol conversion coefficients (ECC; i.e., proportion of pure alcohol for each beverage type) are 0.045 for beer, 0.129 for wine, and 0.411 for spirits (Doernberg and Stinson 1985).</p> <p>Following the ethanol conversions, gallons of ethanol for beer, wine, and spirits are summed to gallons of ethanol for all beverages.</p> |
| Population | Do you use population aged 15+ as your denominator (Y/N)? | If N, what population do you use? Specify the age group and the source if possible. | <p>In this report, AEDS uses the population of people ages 14 and older to calculate per capita consumption rates. Although age 14 is below the minimum legal age for purchasing alcoholic beverages throughout the United States, most self-report surveys indicate that many people drink alcoholic beverages at age 14. Resident population data source: Centers for Disease Control and Prevention's WONDER online query system, which provides bridged-race population estimates produced by the U.S. Census Bureau in collaboration with the National Center for Health Statistics.</p> |

Romania

Sources:

From 2006: **INS Romania**, Survey on consumption of beverages and soft drinks, from the statistical survey on production and services and from Trade statistics: indicator for Sustainable development goals - 2030 Targets - Target 10 - Social - *Average Alcohol Consumption per Inhabitant*.

2000-2005: **WHO Global Information System on Alcohol and Health (GISAH).**

Data extracted 21 June 2023 at

<https://apps.who.int/gho/data/node.gisah.A1039?lang=en&showonly=GISAH>.

1961-1999: Food and Agriculture Organization of the UN (FAO).

Methodology:

From 2006 onwards:

- The average alcohol consumption is the amount of distilled alcoholic beverages, wines and beer, in the equivalent of 100% alcohol, which returns on average, per capita, in the reference year.
- Average consumption per capita represents the quantities of beverages consumed, on average, per inhabitant, in the reference year, regardless of the source of supply – trade, free market, own production of agricultural producers (only for wines) – and the place where it is consumed (individual households, restaurants, canteens, etc.).

⚠ **Break in time series in 2006** due to a change in source.
