

OECD Health Statistics 2023 Definitions, Sources and Methods

Midwives licensed to practice

Midwives licensed to practice have acquired the requisite education and qualifications to be registered and/or legally licensed to practice midwifery. They include both practising and other (non-practising) midwives.

Inclusion

- Midwifery professionals (ISCO-08 code: 2222) and midwifery associate professionals (ISCO-08 code: 3222)
- Midwives who provide services directly to patients
- Midwives for whom their midwifery education is a prerequisite for the execution of the job
- Midwives for whom their midwifery education is NOT a prerequisite for the execution of the job
- Midwives licensed to practice but who due to various reasons are not economically active (e.g. unemployed or retired)
- Midwives working abroad

Note: The number should be at the end of the calendar year.

Sources and Methods

Australia

Source of data:

- 2013 onwards: **Department of Health** (DoH). NHWDS Nursing and Midwifery Practitioners Data. Data request. Also available at http://hwd.health.gov.au/. Data are as at the end of the re-registration period for the profession in the reference year.

Coverage:

- Data regarding midwives licensed to practice include those midwives who are registered with the Nursing and Midwifery Board of Australia (NMBA), in conjunction with the AHPRA, to practice in the midwifery profession.
- Data are based on information from the National Health Workforce Data Set (NHWDS). The NHWDS combines data from the National Registration and Accreditation Scheme (NRAS) with health workforce survey data collected at the time of annual registration renewal. For more information see Appendix A of *Nursing and midwifery workforce 2011* at http://www.aihw.gov.au/publication-detail/?id=10737422167.
- From 2013 the NHWDS is held by the Department of Health and the data has minor differences from the previous AIHW holdings due to the method of imputation for survey non-response and enhanced geocoding methods.
- In 2017, the data before 2013 have been removed from the database due to comparison issues.

Austria

Source of data: Austrian professional organisation of midwives.

Reference period: 31st December.

Coverage:

- Midwifery professionals (ISCO-08 code: 2222). There are no midwifery associate professionals (ISCO-08 code: 3222) in Austria.
- Included are midwives practising exclusively in their private practice, exclusively in hospitals or both in their private practice and in hospitals.
- Included are midwives who are not active in gainful employment but are in a valid employment relationship (e. g.,

maternity leave or parental leave).

- Included are midwives with part-time working conditions.
- Midwives for whom their midwifery education is not a prerequisite for the execution of the job
- Midwives licensed to practice but who due to various reasons are not economically active (e.g. unemployed or retired).

Belgium

Source of data: 2004-2016 data selected from the Federal database of healthcare professionals.

- 2004-2020: selection using the PlanKad Midwifes (Vroedvrouwen op de arbeidsmarkt, 2004-2020). Linked data of FPS Health, RIZIV/INAMI and Datawarehouse under the supervision of the cell "Planning and offer of healthcare professions" of the FPS Health, Food chain safety and Environment. Coverage:
- 2004-2014: This number represents all persons who have obtained a diploma as Midwife.
- From 2015 onwards: This number contains all midwives whose latest diploma is that of Midwife. Break in time series; 2015.

Canada

<u>Source of data</u>: Health Workforce Database, Canadian Institute for Health Information. <u>Coverage</u>:

- 1991-2021 data includes active registered midwives, i.e. midwives registered/licensed with provincial/territorial regulatory/licensing authority as qualified to seek employment. However, they may or may not be currently employed.
- The numbers may undercount the number of professionally active midwives in provinces/territories where regulation requiring licensure as a condition of practice is not in place.
- As of 2019, midwifery was regulated in all provinces and territories with the exception of Prince Edward Island and the Yukon.
- Part of the consistent increase in the count of midwives may reflect changes in legislation requiring registration rather than an actual increase in the number of midwives in the workforce.
- In Canada, one is required to be registered with the midwifery regulator in order to practice midwifery. If one is only registered with a nursing regulator, one is not permitted to practice midwifery. As a result, to prevent double-counting, we removed all nurses working full-time as midwives from midwifery counts for all the years.
- Registration type may vary among jurisdictions and from year to year. Comparisons over time should be made with caution.

Break in time series:

- Starting 2001, counts did not include registered nurses working full-time as midwives.
- Starting 2014, new data sources and definitions were used.

Notes:

- 2019 count was unavailable for Nova Scotia. The 2018 count was used as an estimate of the 2019 count for that province.
- 2020 count was unavailable for Northwest Territories. The 2019 count was used as an estimate of the 2020 count for that province.
- 2019 to 2021 data does not include Prince Edward Island and Yukon, as data is not applicable/available. Refer to Health Workforce in Canada, 2017 to 2021: Overview Methodology Notes. for more detailed methodological notes, data quality issues and profession-specific information.

Chile

<u>Source of data</u>: **Ministry of Health** using as original source the National Registry of Individual Health Providers from the **Health Superintendence** (<u>www.superdesalud.cl</u>), which was created by a law-ranking decree of November 2008, progressively installed since 2009, and is henceforth used. Its creation and maintenance are in charge of the Health Superintendence.

- The inscription in the Register has been progressive, and the changes in the figures that can be observed since 2010 are principally due to its progressive extension. The prevision was that this effect remains at least until the end of 2013.

Coverage: Nationwide.

- Data include both public and private sectors' employed midwives.
- The difference between 2010 and 2013 figures of total midwives is due both to the incorporation in the Registry of the new midwives graduates from 2010 to 2013 and to the gradual extension of the Registry. Since 2014, it could be considered that the extensibility of the Registry effect on the tendency is lower than in the previous period.
- Professionals with double grade "nurse-midwife" are counted together with nurses.

Colombia

Data not available.

Costa Rica

Data not available.

Note: Midwifery is not a recognised profession in Costa Rica.

Czech Republic

<u>Source of data</u>: **National Centre of Nursing and Other Health Professions**; Register of healthcare workers competent to pursue a healthcare profession without professional supervision. Since 2017, the certificate was canceled.

Reference period: 31st December.

Coverage:

- Data refer to midwives competent to pursue a healthcare profession without professional supervision (number of registered persons with valid registration).
- Data comprise non-practising midwives and midwives working outside healthcare system also, unlike to data on practising midwives.
- As of 1.9.2017, the certificates are not issued and the validity of previously issued certificates is not extended.
- Data from 2017 are not available yet (data from a new register are still validated for completeness and accuracy). Break in time series: 2016. In 2016, length of registration was changed by actual law. Hence the number of registrations also changed.

Denmark

Source of data: The Danish Health Data Authority, Labour Register for Health Personnel.

Reference period: 31st December.

Estonia

Source of data: Registry of licensed healthcare personnel, **Health Care Board**.

Reference period: January of the following year.

Coverage:

- The number of licensed midwives refers to overall potential, not persons by the last obtained specialty.

Finland

Source of data: VALVIRA. National Supervisory Authority for Welfare and Health. Register on Qualified Health Care Personnel.

Reference period: At the end of the calendar year.

<u>Deviation from the definition:</u> Figures include all individuals licensed to practice as a midwife – however, many of them work primarily as nurses. As any acquired licenses do not expire, even upon retirement, this data includes only individuals under the age of 65 to better reflect the actually available work force.

<u>Break in times series</u>: Until 1993, the Finnish data includes only midwives who have the midwife education as their basic education. Since 1994, the data includes specialist nurses with midwife qualifications as well.

France

Data not available.

Germany

Data not available.

Greece

Data not available.

Hungary

Source of data:

- From 2013 until 2014: **Office of Health Care Authorisation and Administrative Procedures** (EEKH in Hungarian) <u>www.eekh.hu</u>, Basic register.
- From 2015 to 2016, **Health Registration and Training Center** (ENKK in Hungarian) <u>www.enkk.hu</u>, Basic register.
- From 2017 to 2020, National Healthcare Service Center (ÁEEK in Hungarian) www.enkk.hu, Basic register.
- From 2021, **National Directorate General for Hospitals** (OKFŐ in Hungarian) <u>www.enkk.hu</u>, Basic register. Reference period: 31st December.

<u>Coverage</u>: Data source for professionals licenced to practice is the Basic Register, which is a national healthcare qualifications register including the list of all the healthcare professionals holding qualification obtained or recognised in Hungary. So the basic register includes the healthcare professionals, who provide services directly to patients and also who are economically inactive (e.g. unemployed or retired and who are working abroad).

Iceland

Source of data:

2016 and onwards: The Directorate of Health, Register of Licenced Health Care Professionals.

Until 2015: **The Directorate of Health**. Register of Midwives.

Reference period: 31st December.

Coverage:

- Midwives: 18 months of university education after completion of a nursing degree.
- Includes are all midwives with a license (all ages regardless of employment status, employment location (inside or outside of the country) or nationality).

<u>Break in time series</u>: Break in series in 2016 is due to change in data source. The data source is the Register of Licenced Health Care Professionals instead of the Register of Midwives, which no longer exists.

Ireland

<u>Source of data</u>: **Nursing and Midwifery Board of Ireland - An Bord Altranais** (https://www.nmbi.ie/Home). <u>Reference period</u>: Figures refer to as at end of December.

Coverage:

- Figures refer to the total number of active registered midwives on the Board's register as at end of December of the reference year. A midwife on the register has completed a programme of midwifery education and is qualified and authorized to practice midwifery in Ireland. This does not necessarily mean that each midwife is active in the field of midwifery.
- Data may include nurses since it is not possible to distinguish between nurses and midwives, as all registered midwives also hold registered nursing qualifications.
- Data is available only for reference years 2017 and 2019 onwards.

Israel

Source of data: The data are based on the Midwives License Registry maintained by the Nursing Division and the

Health Information Division in the **Ministry of Health**, for which the demographic information is periodically updated from the Population Registry at the Ministry of Interior.

Reference period: End of the year.

<u>Coverage</u>: Data are for all licensed midwives. The number of midwives is not included in the number of nurses.

<u>Note</u>: The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities.

The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

Italy

Source of data: FNOPO (National Institute keeping the register of midwives). www.fnopo.it.

Reference period: 31st December.

Coverage: All midwives licensed to practice.

Deviation from the definition: None

<u>Estimation method</u>: None Break in time series: None

Japan

Data not available.

Korea

Source of data: Ministry of Health and Welfare, Yearbook of Health and Welfare Statistics.

Latvia

Source of data: **Health Inspectorate of Latvia**; Register of Medical Practitioners and Medical Support Staff. Reference period: 31 December.

<u>Coverage</u>: There has been an improvement in the quality of the Register of Medical Practitioners and Medical Support Staff data in 2018. The data before 2018, not comparable, are not shown.

Lithuania

Source of data:

- Up to 2006: State Health Care Accreditation Agency under the Ministry of Health, Register of licenses.
- Since 2011: **Health Information Centre of Institute of Hygiene**, data is calculated from Compulsory Health Insurance Fund information system (subsystem METAS). Report "Health Statistics of Lithuania", available from http://www.hi.lt/health-statistic-of-lithuania.html. Available on Official Statistics Portal of Statistics Lithuania http://osp.stat.gov.lt/en.

Reference period: 31st December.

<u>Coverage</u>: The number of midwives licensed to practice includes all midwives having valid license at the end of the year.

Break in time series:

- 2011: Data source changed.

Luxembourg

Source of data: Ministère de la Santé. Register of doctors and health professionals.

Reference period: 31st December.

Mexico

Data not available.

Netherlands

<u>Source of data</u>: Data based on **BIG register** (register of (para) medical professions) and **SSB database** (microintegrated database of **Statistics Netherlands** with data from municipal register, tax register, social security, business register).

Reference period: The last Friday before Christmas.

Break in time series:

- 2019: Re-registration effect. Since 2014, midwives, nurses and physiotherapists are obliged to re-register. The requirement is that they have been practising in the past 5 years.
- As of 2014, midwives, nurses and physiotherapists are obliged to re-register. The requirement is that they have been practising in the past 5 years. As a result the figures are significantly lower than before.

New Zealand

<u>Source of data</u>: **NZ Midwifery Council Workforce Survey**, based on data from the New Zealand Midwifery Council's workforce survey.

<u>Reference period</u>: Data for the 2017 and 2018 survey are for midwives who applied for an annual practising certificate in February and March.

Coverage:

- Head count data.
- There was a change in data collection from 2005 onwards as midwives separated from nurses and created their own professional body who now supply the data.
- Pre-2005 is not comparable as during that period there were nurses practising as midwives and those with midwifery qualifications practising as nurses.
- This indicator comprises of all midwives that were issued with an Annual Practising Certificate regardless of whether they were working in midwifery in New Zealand or not. It does not include those that replied to the workforce survey but were not issued an Annual Practising Certificate.

 Break in time series: 2014.
- Data prior to 2014 is based on the number of midwives on the New Zealand midwifery register with a current practicing certificate at the end of the practicing year (31 March), as reported in the Midwifery Council's Annual Reports. From 2014 onwards, data are taken from the NZ Midwifery Council Workforce Survey Report, which is done closer to the end of the calendar year, and thus more in line with the time period covered by the OECD data request (same data source, which is those holding a current midwifery annual practicing certificate).

Norway

<u>Source of data</u>: **Statistics Norway**; Statistics on health-care personnel. Administrative registers. See http://www.ssb.no/hesospers_en/.

Reference period: 3rd week of November.

<u>Coverage</u>: The figures provided cover all registered midwives.

Break in time series: 2015.

- As from 2015, the register-based employment statistics will be based on a new data source for employees. Until the end of 2014, the main data source was The Central Register on Employers and Employees (EE register), produced by the Norwegian Labour and Welfare Organisation (NAV). In 2015, this reporting to NAV was coordinated with the reporting of earnings and personnel data to the Tax Administration and Statistics Norway. This common reporting system is called "a-ordningen" (the a-system).

Poland

<u>Source of data</u>: **Ministry of Health**. Register of nurses and midwives of the **Main Polish Chamber of Nurses and Midwives**.

Reference period: 31st December.

Portugal

Data not available.

Slovak Republic

Data not available.

Slovenia

Data not available.

Spain

Source of data: National Statistics Institute (INE), from the Register of Nurses Council.

https://www.ine.es/dyngs/INEbase/es/operacion.htm?c=Estadistica_C&cid=1254736176781&menu=ultiDatos&idp=1254735573175.

Reference period: Data as of December 31.

Coverage:

- In Spain, the midwifery educational programme is a specialty of nursing education.
- Data include midwives "licensed to practice" and who are registered in the Nurses Council.

Sweden

<u>Source of data</u>: **National Board of Health and Welfare**, LOVA-register (change of register-name from former NPS-register).

Reference period: 1st November.

Coverage:

- Non-retired personnel.
- 100% coverage for licensed to practise midwives until 2020.
- The entire time series has been revised in 2023.

Switzerland

Data not available.

Türkiye

Data not available.

United Kingdom

<u>Source of data</u>: **Nursing and Midwifery Council (NMC)**, United Kingdom. https://www.nmc.org.uk/about-us/registration-statistics/.

Reference period: Data as at 30 September every year.

Coverage: Data include all midwives eligible to practice in the UK.

United States

Source of data:

- American Midwifery Certification Board (AMCB) http://www.amcbmidwife.org/. MCB Annual Reports http://www.amcbmidwife.org/about-amcb/annual-reports. Used with permission of AMCB.
- North American Registry of Midwives (NARM) http://narm.org/. NARM Annual Reports http://narm.org/about-narm/annual-reports/. Data as for August of each year. Used with permission of NARM. Coverage:
- Aggregate counts of all certified nurse-midwife (CNM), certified midwife (CM), and certified professional midwives (CPM) by the AMCB, and the NARM.
- All certified midwives for the 50 states and the District of Columbia. Counts include foreign midwives certified to practice in the US.
- Data exclude non-certified midwives (i.e., lay midwife).

- In the US, the term non-certified or unlicensed traditional midwife is used to designate midwife who was educated through informal routes such as self-study or apprenticeship rather than through a formal program. This term does not necessarily mean a low level of education, just that the midwife chose either not to become certified or licensed, or there was no certification available for her type of education (as was the fact before the Certified Professional Midwife (CPM) credential was available). The number of non-certified midwives in the US is nominal. Deviation from the definition: The count reflects the number of certified midwives not the number of midwives licenses. In the US, the number of licenses can be used as a proxy for the count of licensed midwives. In the US, all midwives are nationally certified (one count) but midwives can have more than one license. Example: Due to states' lines proximity, midwives in the District of Columbia (DC) can have a license to practice in DC, Maryland, and Virginia.

There is a possibility that a small number of midwives in the US possess a double certification (by AMCB and NARM). However, the possibility of a double certification and consequently a double counting is small. <u>Estimation method</u>: Head counts of nationally certified midwives by AMCB and NARM for August of each respective year.

NON-OECD ECONOMIES

Croatia

Source of data: Croatian Chamber of Midwives. Reference period: Status on December 31st.

Romania

Source of data: Order of Nurses, Midwives and Medical Assistants in Romania.

Reference period: data as of 31st December.

Coverage:

- The data cover public and private sector.
- Data doesn't include: nurses working most of the time in OG departments. Presently there are no longer associate professional midwives graduating, only tertiary education midwives are graduating.

<u>Break in time series</u>: Beginning with 2017, midwives that are not practicing midwifery (e.g. they perform nursing activities in independent medical offices and are licensed as such) are not included.

© OECD, OECD Health Statistics 2023. July 2023. http://www.oecd.org/health/health-data.htm
