Introduction

This document presents the maps of the territorial levels of Member countries used in the OECD classification and presented in the OECD Regional database ([OECD Data Explorer](#)), which contains statistical information at sub-national territorial level for all OECD countries. It encompasses yearly time-series for around 100 indicators of demography, economic accounts, labour market, education, environment, social and innovation themes.

Territorial level classification

Regions within the 38 OECD countries are classified on two territorial levels - large (TL2) and small (TL3) - reflecting the administrative organisation of countries. This classification facilitates greater comparability of geographic units at the same territorial level. The two territorial levels, which are officially established and relatively stable in all member countries, are used as a framework for implementing regional policies in most countries.

The 435 OECD large (TL2) regions represent the first administrative tier of subnational government, for example, Texas in the United States. The 2 420 OECD small (TL3) regions correspond to administrative regions, except in Australia, Canada, Latvia and the United States. For European countries, TL regions are largely consistent with the Eurostat NUTS2 and NUTS3 2024 classification. TL3 regions are contained in a TL2 region, except in the United States. For Costa Rica, Israel and New Zealand, the TL3 level is equivalent to the TL2 level. All the regions are defined within national borders. See Table 1 for map sources and Table 2 for the regional classification of each country.

In addition to the 38 OECD member countries, maps are also produced for accession countries (Bulgaria, Croatia, Peru and Romania) whose territorial levels have been validated through the Regional Development Policy Committee (RDPC) accession reviews.

Non-official grids

Countries may publish territorial data at territorial levels that are not part of the OECD official territorial grids, among other reasons because data availability. This is for instance the case of labour market indicators in Canada. These levels are labelled as ‘non-official grids’ (NOGs) in the territorial grid.

Macro-regions

Macro-regions are a higher level of aggregation of TL2. These macro-regions offer an alternative when data at lower levels are not available or cannot be produced, even if they do not have an administrative function. For European countries, these regions are mostly consistent with the NUTS1.

The complete list of regions by is available in the [OECD Territorial correspondence \(xlsx\)](#) on OECD Data Explorer, along with the information on territorial typologies.

Representation of maps, codes and labels

In countries with multiple islands or separated areas, (e.g. Greece, Denmark), each TL2 region is shown in a distinct colour to help clearly identify all parts of the same region.

Each region is assigned a unique code composed with the two-letter ISO (ISO2) country code as prefix, however, to improve readability on the map, codes are typically truncated by removing the ISO2 prefix. As a result, only the last three digits (or two digits for Germany) are displayed. This means that for instance a label like “101” on the map of France corresponds to “FR101” in the full code. In some cases, where space allows or clarity requires, the full code is displayed in its entirety.

Below the map, a table is provided listing all TL2 and TL3 codes along with the corresponding region names. This ensures users can cross-reference the truncated map labels with their full identifiers. In certain countries, regional names may appear with official or commonly used variants, separated by a slash (“/”). For example, a region might be labeled as “Valle d’Aosta/Vallée d’Aoste” to reflect bilingual or administrative variations.

For Greece, Korea, and Japan, all regional names are transliterated into the Latin alphabet to ensure broader accessibility. Given that English and French are the official languages of the OECD, English translations are provided for all TL2 regions, and for TL3 regions in cases where countries officially publish regional names in English. These translations are displayed in parentheses immediately following the original name, for instance: “Andalucía (Andalusia).” This formatting allows for both fidelity to original naming conventions and ease of understanding for international users.

Versions

April 2026: Revision of English names of Polish regions PL43 (Lubuskie), PL71 (Łódzkie), PL72 (Świętokrzyskie), and PL81 (Lubelskie). September 2025: update reflects the changes between NUTS2021 and 2024 NUTS classifications (Source: [Eurostat](#)), the change from the NUTS3 to the ITL3(2025) boundaries in the United Kingdom ; update of TL3 borders of Iceland ; update of the boundaries of Región Central (Costa Rica); addition of Bulgaria, Croatia, Peru and Romania; corrections to TL2 region names so they all appear in the original language and English. November 2023: change from “Czech Republic” to “Czechia”. January 2022: update reflects the changes in 2021 NUTS classification); update of TL3 Colombian regions. August 2021: update of the map of Japan. October 2020: addition of Colombian TL2 regions. March 2020: change in Chilean regions, with one additional TL2 region: Ñuble (CL16), which was previously a TL3 under the code CL083 of under Biobío (CL08). September 2018: update reflects the changes in 2016 NUTS.

Disclaimers

This document, as well as any data and any map included herein, are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
